

ImagePro - Film.. Data.. Action!

Image assets sitting in a vault are of limited value. If you hold significant film and digital media assets, ImagePro is here to help you take action and capture the value of your assets.

Our capabilities and team have grown measurably over recent years, providing a solid resource for the entertainment industry and institutions looking to protect and preserve their assets.

From the heart of Burbank, our Film Facility serves key clients for film-to-digital conversion, film restoration and preservation. Data Center services include DI Validation, LTO migration, LTO archiving and digital delivery to the Cloud.

ImagePro Film Facility

We have over 30 years of experience providing **Film Restoration and Preservation** services.

Our purpose-built wet-gate scanner is an uncommon piece of equipment, providing a service that few others can do. We take "dirty" film and, using a special solution, clean it up as we are scanning. This provides a superior first digital version that needs less or no subsequent restoration.

Our state-of-the-art custom-built dry-gate scanner is fast and versatile. It handles formats ranging from 8mm and super-8 through 16mm to 35mm, allowing a wide range of original imaging materials and productions to be transformed to digital imaging.

ImagePro Data Center

Our secure Data Center provides a range of options for **Digital Migration, DI Validation and Archiving**. These include checking, correcting and updating files up to LTO 9 archives and/or digital delivery for storing in the Cloud. We are masters at transforming your original content, such as content shot in 2K or HD, to newer more viable formats such as UHD and 4K.

All of ImagePro's services are backed by a talented team with the right skills and industry knowledge to ensure you get the best solution for your needs.
